

AOL Users:

Please try to use Internet Explorer instead of the AOL browser. After opening Internet Explorer, please change your settings as shown in the screen shots below. Please also call our office at 706-868-3421 if you are still having problems with the site. These directions change your security settings to allow the website access to run on your machine (AOL changed the default settings on your computer to a more restrictive setting).

Below are screenshots of properties in internet explorer – try setting yours to look like these, and also delete all your temporary internet files and cookies/history, etc. The 3rd – last screenshots are from clicking the “Custom Level” button on the security tab from Internet Options (that’s the 2nd screen shot).

In this window (see left):

Clear your temporary internet files (including downloaded files)

Clear Cookies and History

Use this window to set the security for internet pages

Click on the “Custom level” button to access the screen shots below.
